

Standalone LED Power Supply & Rokuhan-Compatible Adapter Cable

Here at Ztrains, we *love LEDs!* It's amazing how lights can transform and add life to almost any scene. **The Ztrains ZTR-250** will give you a dedicated 1 amp power source for your LEDs and other 12VDC accessory needs.

The Ztrains ZTR-250 can come in very handy if you want to run a large number of LEDs, or want to set up separate lighting zones without taxing the accessory port output of your Rokuhan controller.

A good rule of thumb here is a typical white LED will draw roughly 20mA to 30mA, so this power supply can power up to 50 LEDs. We suggested keeping it between 40 and 50 LEDs to give the power supply a bit of headroom.

The ZTR-250 is perfect for plugging in directly to the 5-connector Rokuhan A016 or the all-new, enclosed 12-connector Ztrains ZTR-260.

You can also use **the Ztrains ZTR-210 LED Remote Dimmer** inline between the **Ztrains ZTR-250** and the accessory port for even more control of your LEDs!
